SUMMARY

Computer Science student with a strong foundation in **Machine Learning** and **Python**, and hands-on academic project experience. Skilled in **Supervised & Unsupervised Learning**, **Data Structures & Algorithms**, **data preprocessing**, and **model evaluation** using **Scikit-learn**, **Pandas**, and **NumPy**. Eager to apply problem-solving skills and technical knowledge to **entry-level roles** in a growth-oriented organization

SKILLS

Programming & Web Technologies: Python, Java, SQL, HTML, CSS, JavaScript, C, problem-solving skill, Adaptability, communication skill
Machine Learning & Data Analysis: Supervised & Unsupervised Learning, Regression, Classification, NumPy, Pandas, Matplotlib, Seaborn, Scikit-Learn, data visualization tool like Power BI
Tools, Databases & Soft Skills: MS Excel, Power BI, Git, GitHub, Jupyter Notebook, VS Code, Leet Code, Code Studio, databases MySQL, MongoDB, analytical thinking, debugging, and team collaboration, MS Office Suite

EXPERIENCE

- Data Science Intern | **CODTECH IT SOLUTIONS PRIVATE LIMITED** Remote | [Jun 2026 - Jul 2026]
 - Completed a **1-month Data Science internship** with training focused on practical learning, skill development, and assignments.
 - Worked on **assigned Data Science tasks and group projects**, providing regular progress updates and collaborating with team members.
 - Strengthened practical skills in **data science**, **problem-solving**, teamwork, and professional communication through supervised internship activities.
- Data Science Intern | **Cognifyz Technologies** Remote | [Feb 2026 - Mar 2026]
 - Developed a Random Forest Regressor model to predict restaurant aggregate ratings with **91% accuracy (R2 score)**.
 - Engineered a custom **Cuisine_Count** feature to analyze the impact of menu diversity on customer satisfaction, proving a positive correlation between variety and rating stability.
 - Automated data cleaning and **preprocessing pipelines using Pandas and NumPy**, handling missing values and encoding categorical variables for **9,000+ restaurant records**.
 - Created interactive data visualizations using **Seaborn and Matplotlib** to identify key performance drivers, such as the correlation between 'Votes' and 'Aggregate Rating'.

PROJECTS

- House Price Prediction | **PYTHON, SCIKIT-LEARN, MACHINE LEARNING**
 - Developed and deployed an **end-to-end Machine Learning web application**, covering **data preprocessing, model training, evaluation, and inference** using **Python and Scikit-learn**.
 - Achieved **~96% prediction accuracy** by implementing a **Random Forest Regressor**, with a robust preprocessing pipeline including **One-Hot Encoding** and **feature scaling**.
 - Architected a scalable Streamlit application, integrating CI/CD pipelines and automated testing to achieve 99.9% uptime and zero critical bugs in production during the first quarter.
- SmartCart Customer Clustering System | **PYTHON, SCIKIT-LEARN, UNSUPERVISED ML**
 - Built a customer segmentation system for **2,240 customers** across **22 attributes** using **K-Means** and **Agglomerative Clustering** to identify actionable purchasing and engagement patterns.
 - Engineered Age, Customer Tenure, Total Spending, and Total Children; handled missing values/outliers, applied **One-Hot Encoding**, **StandardScaler**, and **PCA**, evaluated cluster quality using the **Elbow Method** and **Silhouette Score** and selected 4 customer segments.
 - Translated clusters into **targeted marketing and retention strategies** for high-value, lower-value, and highly responsive customer groups; GitHub: [SmartCart-Clustering-System](#)

CERTIFICATIONS

- Data Science Foundations – **IBM**
- Machine Learning Using Python – **SIMPLILEARN**
- Intermediate SQL for Data Scientist Python – **LINKEDIN**
- Python for Data Science – **IBM**

EDUCATION

D.Y. Patil Technical Campus, Kolhapur

Expected Graduation - 2027

Bachelor of Technology: Computer Science (Data Science)
